

Naci Anıl Akman.

I build enterprise portal, HR, and travel systems with .NET and React. I analyze existing projects and manage all processes from architecture to deployment.

EXPERIENCE

Eroğlu Global Holding Full Stack Developer

MAR 2026 — PRESENT
3 MOS

I develop the holding's internal enterprise access panel, travel management, and HR advance modules. I am establishing a single sign-on (SSO) and centralized authorization infrastructure for operations in Turkey and Egypt. I analyze existing systems, integrate them into this unified structure, and manage all development processes.

- Modernized the enterprise access panel; consolidated the role-based application catalog, targeted announcements, meal menu, and notification center into a centralized interface behind a single login.
- Integrated the standalone travel management system into the main panel. Removed the need for a second login by migrating to the SSO infrastructure, and aligned the data and permission model with the holding's shared structure.
- Integrated Datalab and OpenAI OCR into the HR advance module. Significantly reduced manual data entry with features like amount/date extraction from receipts, confidence scoring, and visual validation.
- Digitalized the advance process end-to-end: request, approval, installments, and repayment. Added multi-company support and company-based authorization features.

React · TypeScript · .NET · C# · ASP.NET Core · Entity Framework Core · SQL Server · OpenAI

Kansuk İlaç Full Stack Developer

OCT 2025 — FEB 2026
4 MOS

I developed the internal HR portal and management panel using ASP.NET MVC. I centralized HR data scattered across Access databases and desktop applications, migrating it to a single web-based system.

- Improved performance review, leave tracking, and employee management modules. Moved operations previously handled via Excel to the web environment.
- Consolidated scattered records from different systems into a relational data model in a single center.
- Worked on the employee performance evaluation system, designing role-based reporting screens for managers and reducing manual processes.

C# · .NET · ASP.NET MVC · Entity Framework · SQL Server · React

Digitallica Full Stack Developer

MAY 2021 — OCT 2025
4 YRS 5 MOS

I developed custom web applications for enterprise clients. My primary focus was building Oriento, a multi-tenant orientation and training platform, using .NET and React.

- Built the orientation/offboarding, interactive training, task management, and reporting modules for Oriento. The platform was used by companies like ING Bank, Kibar Holding, FNSS, and SoftTech.
- Adapted the existing on-prem platform into a cloud version for FNSS. Added features such as role-based management, orientation workflows, and task tracking with buddy pairing.
- Built the data layer with REST APIs and Entity Framework, designing the modules to be easily adaptable to different client needs.
- Took part in collaborative projects with Turkcell, such as an internet safety game for kids (Galaksel).
- Worked on AI product prototypes like Awarder AI and LunaBuddy. Analyzed scenarios where basic text processing methods fell short, focusing on RAG and vector-based search solutions.

React · TypeScript · .NET · C# · Entity Framework · Tailwind CSS · WordPress

EARLIER EXPERIENCE

Before Digitallica, junior/intern roles at Arcadias Tech, Bizmed — Sinerji Bilişim, and Yüce Yazılım; web development, UI improvements, and backend work with JavaScript, HTML/CSS, Delphi, and Oracle.

Bizmed — Sinerji Bilişim · Junior Software Developer (Jan 2021 — Apr 2021)

Arcadias Tech · Junior Software Developer (Oct 2020 — Jan 2021)

Yüce Yazılım · Software Development Intern (May 2020 — Jul 2020)

SELECTED PROJECTS

Enterprise Dashboard (Portal)

React · TypeScript · .NET · ASP.NET Core · SQL Server

A single-login enterprise access panel developed for holding employees. Unifies company operations in Turkey and Egypt by offering announcements, meal menus, and an application catalog on a single screen with role-based authorization.

Travel Management System

React · TypeScript · .NET · ASP.NET Core · SQL Server

A system managing travel requests, approvals, and budget processes across the holding. Integrated into the central access panel with SSO and a shared permission model for operations in Turkey and Egypt.

An AI-based email assistant I am developing as a personal project. It performs semantic searches by indexing past communications and internal response patterns in a vector database (Qdrant). Generates automated reply drafts using the RAG architecture to reference older emails. Designed so all operations pass through a manual approval stage.

Oriento — Onboarding & Training Platform

React · TypeScript · .NET · Entity Framework

A multi-tenant orientation and training platform. Developed using .NET and React; utilized by companies like ING Bank, Kibar Holding, and SoftTech. Features role-based management, orientation workflows, and task tracking.

SKILLS

BACKEND

C# · .NET · ASP.NET Core · ASP.NET MVC · Entity Framework Core · REST API · SignalR · Hangfire

FRONTEND

React · TypeScript · JavaScript · Next.js · Redux · Tailwind CSS · MDX

DATABASE

SQL Server · T-SQL · EF Core Migrations · PostgreSQL · MySQL

AI & INTEGRATION

OpenAI · RAG · Embeddings · Vector search (Qdrant) · OCR (Datalab) · Microsoft Graph / IMAP

ARCHITECTURE & PRODUCT OWNERSHIP

Authentication & permissions · SSO · Multi-tenant architecture · Migration · Reporting / dashboards · Application lifecycle

TOOLS

Git · Docker · Visual Studio · Postman

EDUCATION

İstanbul University — Hasan Ali Yücel Faculty of Education

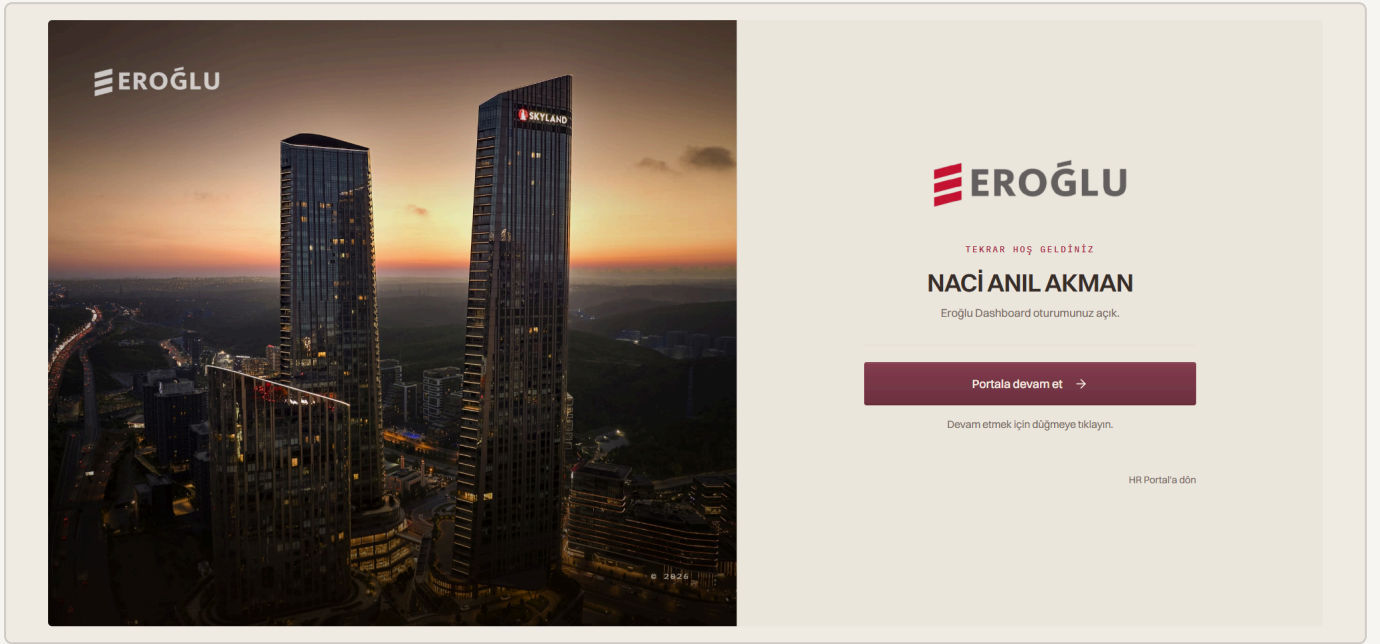

Bachelor's Degree · Computer Education and Instructional Technologies Teaching · 2020

CERTIFICATIONS

Programming in C# (Microsoft 20483)	2018
Developing ASP.NET MVC Web Applications (Microsoft 20486)	2018
Programming in HTML5 with JavaScript and CSS3 (Microsoft 20480)	2018
Microsoft Certified Developer — Project Completion	2018
Microsoft Certified Developer — Participation	2018
